

# KA05

ILLUSTRATED ASSEMBLY MANUAL HKA05P'1

## IN/OUT shield for Arduino®

### General purpose INPUT - OUTPUT shield for Arduino®

#### Features

- For use with Arduino Due, Arduino Uno, Arduino Mega
- 6 analog inputs
- 6 digital input
- 6 relay contact outputs: 0.5A max 30V (\*)
- Indicator leds for relay outputs and digital inputs

#### Specifications

- Analog inputs: 0..+5VDC
- Digital inputs: dry contact or open collector
- Relays: 12V
- Relay contacts: NO/NC 24VDC/1A max.
- Dimensions: 68 x 53mm / 2.67 x 2.08"

(\*) It is required to power the Arduino UNO (not supplied) with a 12V DC 500mA power supply (not supplied).  
This shield will not work with the Arduino Yun. Use the KA08 or VMA08 with the Arduino Yun.

## *assembly hints*

### 1. Assembly (Skipping this can lead to troubles !)

Ok, so we have your attention. These hints will help you to make this project successful. Read them carefully.

#### 1.1 Make sure you have the right tools:

- A good quality soldering iron (25-40W) with a small tip.
  - Wipe it often on a wet sponge or cloth, to keep it clean; then apply solder to the tip, to give it a wet look. This is called 'thinning' and will protect the tip, and enables you to make good connections. When solder rolls off the tip, it needs cleaning.
  - Thin raisin-core solder. Do not use any flux or grease.
  - A diagonal cutter to trim excess wires. To avoid injury when cutting excess leads, hold the lead so they cannot fly towards the eyes.
  - Needle nose pliers, for bending leads, or to hold components in place.
  - Small blade and Phillips screwdrivers. A basic range is fine.
- For some projects, a basic multi-meter is required, or might be handy.

#### 1.2 Assembly Hints :

- Make sure the skill level matches your experience, to avoid disappointments.
- Follow the instructions carefully. Read and understand the entire step before you perform each operation.
- Perform the assembly in the correct order as stated in this manual.
- Position all parts on the PCB (Printed Circuit Board) as shown on the drawings.
- Values on the circuit diagram are subject to changes, the values in this assembly guide are correct\*.
- Use the check-boxes to mark your progress.
- Please read the included information on safety and customer service.

\* Typographical inaccuracies excluded. Always look for possible last minute manual updates, indicated as 'NOTE' on a separate leaflet.

#### 1.3 Soldering Hints :

1. Mount the component against the PCB surface and carefully solder the leads.

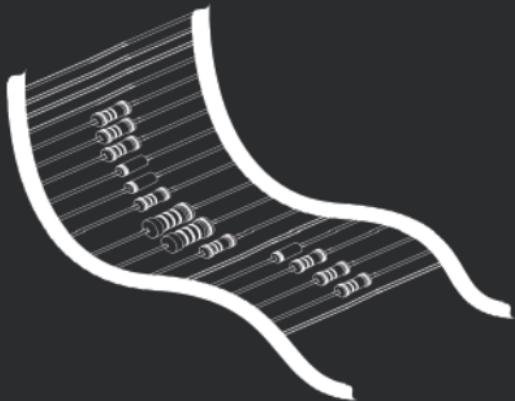

2. Make sure the solder joints are cone-shaped and shiny.

3. Trim excess leads as close as possible to the solder joint.

REMOVE THEM FROM THE TAPE ONE AT A TIME !

Included in this kit

RESISTOR COLOR CODE  
100 OHM +/- 5% 100K OHM +/- 5%

Color	Name	Value	Tolerance
Black	0	0	x1
Brown	1	1	x10

# Leds and how to use them

Leds feature a specific voltage drop, depending on type and colour. Check the datasheet for exact voltage drop and rated current !

Never connect leds in parallel

## How to Calculate the series resistor:

Example: operate a red led (1.7V) on a 9Vdc source.

Required led current for full brightness: 5mA (this can be found in the datasheet of the led)

$$\frac{\text{Supply voltage (V)} - \text{led voltage (V)}}{\text{required current (A)}} = \text{series resistance (ohms)}$$

$\rightarrow \frac{9V - 1.7V}{0.005A} = 1460 \text{ ohm}$

closest value : use a 1k5 resistor

Required resistor power handling= voltage over resistor x current passed through resistor

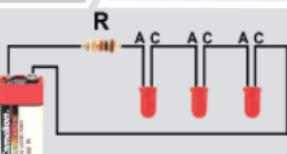

$$\rightarrow (9V - 1.7V) \times 0.005A = 0.036W$$

a standard 1/4W resistor will do the job

## LEDs in series:

Example: 3 x red led (1.7V) on 9V battery

Required led current for full brightness: 5mA (this can be found in the datasheet of the led)

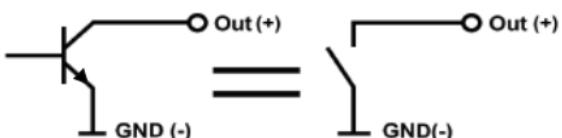

$$\frac{\text{Supply voltage (V)} - (\text{number of leds} \times \text{led voltage (V)})}{\text{required current (A)}} = \text{series resistance (ohms)}$$

$\rightarrow \frac{9V - (3 \times 1.7V)}{0.005A} = 780 \text{ ohm}$

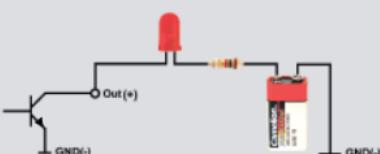

use an 820 ohm resistor

## open collector outputs

An open collector output can be compared to a switch which switches to ground when operated

Example: How to switch an LED by means of an open collector output
